

PUVVADA NIKHIL SAI VENKAT

9640783558 | nikilpuvvada@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Engineering graduate with a strong foundation in Python, SQL, PostgreSQL, Pandas, and Power BI, with hands-on experience in data cleaning, transformation, analysis, automation, and visualization; skilled in building data processing, database management, SQL analysis, reporting, and dashboard projects, with strong problem-solving and analytical abilities.

TECHNICAL SKILLS

Languages: Python, SQL, Java

Databases & Data Tools: PostgreSQL, Snowflake, PySpark, Pandas, MySQL

BI & Visualization: Power BI, Tableau

Web & Other Tools: Django, Git/GitHub, Selenium, VS Code

PROJECTS

Retail Sales Analytics Pipeline

Python, Pandas, Power BI | github.com/NIKHIL-PUVVADA

- Built an end-to-end analytics pipeline that loads customer, product, and transaction data into a relational database and processes it using SQL joins, aggregations, and window functions.
- Used Python and Pandas to generate and clean the transactional dataset before loading it for analysis.
- Analyzed customer purchase behavior to identify high-value customer segments and repeat-purchase patterns.
- Built an interactive Power BI dashboard visualizing revenue trends, category-wise performance, and customer segmentation to support business decision-making.

End-to-End E-Commerce Data Warehouse Pipeline

PostgreSQL, SQL, Snowflake, Power BI | github.com/NIKHIL-PUVVADA

- Built an ETL pipeline in Python to clean and load e-commerce data into PostgreSQL, then migrated it into a Snowflake star schema (1M-row fact table with customer, product, store, and date dimensions).
- Wrote SQL queries to analyze order trends by category, region, and age group, identifying Health & Fitness as the top-performing category.
- Built a Power BI dashboard visualizing order volume, average order value, and category-wise performance.

Python Automation Tool for Expense Reporting

Python, Pandas, OpenPyXL

- Built a Python automation tool that ingests raw expense data, validates and cleans it, and handles missing or malformed records.
- Aggregated expense data by department and category using Pandas.
- Generated a formatted, multi-sheet Excel report automatically using OpenPyXL, including styled headers and auto-sized columns.
- Implemented logging and error handling to support reliable, unattended execution on a scheduled basis.

EDUCATION

B.Tech, Electronics & Communication Engineering — JNTU Kakinada

Apr 2026

Vishnu Institute of Technology | GPA: 8.0

Diploma — SBTET

Apr 2023

Swarnandhra College of Engineering & Technology | GPA: 8.3

ACHIEVEMENTS

- Qualified for the Google Developer Student Clubs (GDSC) Final Round.
- Secured 2nd Prize in the VEDA event for the “Electricity Management Using IoT” project.
